MUTHU KAMATCHI M

Software Developer

7539998917 | muthukamatchi170167@gmail.com | Aruppukkottai, Tamil Nadu

PROFESSIONAL SUMMARY

Software Developer with 2+ years of experience building mobile and web applications end to end. Currently developing the Mahinzo platform — customer, delivery partner and vendor mobile apps in Flutter, a React web application and Node.js backend APIs. Previously delivered WordPress/WooCommerce sites, a Node.js WhatsApp bulk messaging system, a .NET logistics backend with CQRS and MongoDB, and SQL/SSRS call analytics reports. Skilled in Flutter, React, Node.js, Redis, Kotlin (Android), Laravel, PHP, Python (Django), SQL and MongoDB, with a focus on clean UI, reliable API integration and process automation.

TECHNICAL SKILLS

Frontend (Web): React, WordPress, Laravel, HTML5, CSS3, JavaScript, PHP

Frontend (Mobile): Kotlin, Android SDK (UI/UX Development), Flutter

Backend: Node.js, Python (Django), .NET, RESTful API Design, CQRS Pattern, FluentValidation

Database: SQL, MongoDB, Redis, SQL Server Reporting Services (SSRS), Stored Procedures

Tools & Platforms: WooCommerce, whatsapp-web.js, Git, Firebase

Core Competencies: Process Automation, API Integration, Call Analytics, Report Generation, Form Validation

PROFESSIONAL EXPERIENCE

Software Developer — IT Malar Private Limited, Aruppukkottai *2026 – Present*

- Developing and maintaining the Mahinzo platform, covering customer, delivery partner and vendor mobile applications built with Flutter, along with the web application built with React and a Node.js backend.
- Built user-facing Flutter mobile app screens and flows for browsing, ordering and order tracking, along with the React web counterpart.
- Worked on the Flutter partner and vendor applications to support delivery management and vendor order and catalogue handling.
- Collaborated with the team to integrate Node.js backend APIs, fix bugs and deliver reliable releases across all Mahinzo applications.

Software Developer — Yeejai Technologies *2024 – 2026*

- Developed and maintained full-stack web applications, automating business workflows to improve operational efficiency.
- Installed, configured, and maintained WordPress core software, plugins, and themes for security, performance, and compatibility.
- Validated user input forms using regular expressions before submitting data to SQL databases, reducing invalid records.
- Built call analytics reporting systems using SQL stored procedures to track call outcomes — Answered, Busy, and No Answer — with call duration recorded in seconds per record.
- Designed complex analytical reports and dashboards using SQL Server Reporting Services (SSRS).
- Contributed to Android mobile application frontend development using Kotlin, focusing on UI screens and user interaction flows.
- Provided ongoing technical support to software users, resolving issues and ensuring smooth system operation.

COURSES & CERTIFICATIONS

Python Full Stack Course — Uniq Technologies *Sep 2023 – Feb 2024 (6 Months)*

Comprehensive training in Python, Django, RESTful APIs, HTML, CSS, JavaScript, and SQL database management.

PROJECTS

Mahinzo (User App) *Flutter · Node.js · Redis*

Role: Mobile App Developer — Customer Application

- Developed the customer-facing Mahinzo mobile application, enabling users to browse vendors, place orders and track deliveries.
- Implemented intuitive screens and user interaction flows for a smooth ordering experience.
- Integrated backend APIs for authentication, orders and real-time status updates.

Mahinzo Partner (Delivery App) *Flutter · Node.js · Redis*

Role: Mobile App Developer — Delivery Partner Application

- Built the Mahinzo Partner mobile app for delivery partners to receive, accept and manage delivery assignments.
- Implemented order status updates and delivery workflow screens for efficient last-mile operations.
- Integrated backend APIs to keep delivery information in sync with customers and vendors.

Mahinzo Vendor App *Flutter · Node.js · Redis*

Role: Mobile App Developer — Vendor Application

- Developed the Mahinzo Vendor mobile app for vendors to manage incoming orders and their product listings.
- Implemented order acceptance and status management flows to streamline vendor operations.
- Integrated backend APIs for catalogue, order and vendor account management.

Mahinzo Web *React · Node.js · SQL*

Role: Web Developer

- Developed the Mahinzo web application as the web counterpart of the Mahinzo ecosystem.
- Integrated backend APIs to deliver consistent data and functionality across web and mobile platforms.
- Ensured responsive layouts and a consistent user experience across devices.

Aruvi Restaurant Management Platform *WordPress · WooCommerce · PHP*

- Designed and developed a comprehensive restaurant management web platform using WordPress and WooCommerce, enabling digital menu management, online order processing, and enhanced customer experience.
- Customized WooCommerce plugins and themes to support restaurant-specific workflows including table bookings, order tracking, and payment processing.
- Integrated QR code-based menu access, allowing customers to browse and place orders directly from their mobile devices.
- Ensured full mobile responsiveness and optimized page load performance across all devices.

QR-WhatsApp Bulk Messaging System *Node.js · whatsapp-web.js · JavaScript*

- Engineered a high-performance WhatsApp Bulk Messaging System using whatsapp-web.js and Node.js to automate large-scale business communication campaigns.
- Implemented QR-based WhatsApp session authentication for secure multi-device connectivity without manual login.
- Optimized message queue and delivery workflows, significantly reducing manual effort and improving outreach speed for businesses.
- Built a management interface to configure recipient lists, message templates, and scheduling for bulk messaging campaigns.

Logistics Application (Import & Export) *.NET · CQRS · MongoDB · FluentValidation*

- Developed and maintained robust backend services for a comprehensive logistics application specializing in import and export operations using the .NET framework.
- Implemented the CQRS (Command Query Responsibility Segregation) pattern to cleanly separate read and write operations, improving scalability and maintainability of the codebase.
- Applied FluentValidation to enforce strict, reusable validation rules across all command and query models, ensuring reliable and clean data input handling.
- Integrated MongoDB as the primary database for storing shipment records, inventory data, and customs documentation, leveraging its flexible document schema for logistics data.
- Designed and implemented secure, scalable RESTful APIs to facilitate seamless data exchange between internal modules and external logistics partners.
- Engineered core modules including shipment tracking, inventory management, and customs documentation processing using structured CQRS command and query handlers.

Call Analytics Report Generation System *SQL · Stored Procedures · SSRS*

Role: Backend Report Developer

- Designed and developed a comprehensive call analytics reporting system entirely using SQL stored procedures.
- Built stored procedures to classify and aggregate call outcomes — Answered, Busy, and No Answer — per agent and time period with call duration captured in seconds for every record.
- Generated summary and detailed reports displaying total calls, answer rate percentage, average call duration, and missed call trends per agent and team.
- Integrated reports with SQL Server Reporting Services (SSRS) for automated scheduling and distribution to management stakeholders.

- Enabled data-driven decision making for call center teams by providing accurate, real-time performance insights through SQL-only reporting pipelines.

DAL Adulteration Detection Application *Kotlin · Android SDK*

Role: Frontend Developer (Mobile) — Android UI

- Developed the complete Android frontend for a DAL adulteration detection mobile application using Kotlin and Android SDK.
- Designed and implemented intuitive UI screens for image capture, result display, and user guidance flows using Kotlin-based layouts and Material Design components.
- Integrated Android camera functionality to allow users to capture food sample images for adulteration analysis.
- Consumed backend analysis APIs and displayed detection results clearly and accurately on the mobile interface.
- Ensured smooth user experience with responsive layouts and proper error handling across various Android screen sizes.

Plant Disease Detection Application *Kotlin · Android SDK*

Role: Frontend Developer (Mobile) — Android UI

- Built the Android frontend for a plant disease detection mobile application using Kotlin, enabling farmers to identify crop diseases from leaf images.
- Designed screens for image input, disease result display, and detailed disease information using Kotlin and Android Material UI components.
- Implemented camera and gallery integration within the app to allow users to upload or capture plant leaf images for disease analysis.
- Consumed backend machine learning APIs to fetch disease prediction results and rendered them in a clear, user-friendly format on the Android interface.
- Optimized UI responsiveness and ensured compatibility across multiple Android device sizes and OS versions.

EDUCATION

Master of Science — Mathematics | SBK College, Aruppukottai *2020 – 2022*

Bachelor of Science | SBK College, Aruppukottai *2017 – 2020*
